Leadership Forecast Summary

June-August 2026 | USD thousands

Base case: consumption rises from 1,631K in June to 1,937K in August. Cash peaks at 3,773K in July, mainly due to scenario-specific annual prepayments.

Consumption revenue forecast

Scenario	June	July	August
Downside	1,551	1,529	1,509
Base	1,631	1,898	1,937
Upside	1,673	2,446	2,535

Cash collections forecast

Scenario	June	July	August
Downside	2,986	1,463	1,201
Base	2,986	3,773	1,254
Upside	2,986	8,379	1,286

Key takeaways

- **Organic base remains resilient.** The Base scenario reflects moderate growth in the current active customer base, using May usage as the anchor and capped March-May trend coefficients.
- **July cash is deal-driven.** The difference between Base and Upside is primarily explained by the assumed scope of the Vertex opportunity and its annual-prepayment structure.
- **Existing AR is held constant across scenarios.** Scenario differences come from future organic consumption and selected CRM opportunities, while current receivables are forecast using the same collection assumptions.
- **Downside is intentionally conservative.** It applies weaker recent usage dynamics and excludes consumption from CUST-0038 and CUST-0047 due to uncertainty around their commercial status.

Forecast construction

CONSUMPTION REVENUE	CASH COLLECTIONS
1. Existing active customers - May 2026 is the starting point. - Selected large customers use customer-product trends. - Remaining customers use product-level trends. - Scenario coefficients are capped to limit short-term volatility. 2. CRM opportunities - Downside: OPP-1039. - Base: OPP-1039 + OPP-1036. - Upside: OPP-1039 + OPP-1037.	1. Existing AR - Reconstructed as of June 6, 2026. - Near-term AR is scheduled using due date + 7 days. - Overdue AR uses age-based recovery rates. 2. Future postpaid usage - Forecast revenue is shifted into cash using historical payment timing among paid invoices. 3. New prepayments - Annual prepayments from selected CRM opportunities are added separately.

Primary risks and decisions

1. Confirm whether Vertex should be treated as the compute component only or as the full umbrella agreement.
2. Validate expected payment timing and annual-prepayment amounts for OPP-1039 and Vertex.
3. Review the largest overdue receivables and refresh expected recovery timing.
4. Reforecast after June actual usage and cash receipts become available.
5. Track organic performance separately from pipeline-driven growth to avoid masking changes in the underlying customer base.

Leadership implication: the Base case supports continued consumption growth, but a material share of July cash depends on a small number of conditional annual-prepayment opportunities. Planning should distinguish recurring organic performance from deal-driven cash.
